

VENT THIMBLE

New Product Launch!

DESCRIPTION

The vent thimble is manufactured using 30 gauge galvanized steel.

APPLICATIONS

- Typically used in new home construction to provide an opening in brick, stone or siding for a fresh air intake or exhaust hood. It enables the hood to be installed after the wall surface has been completed

FEATURES AND BENEFITS

- Reduces the possibility of the hoods from being damaged
- With the sleeve installed reduces the time required to make a hole in the brick or stone
- After the hood has been installed on the outside of the home the thimble can be filled with insulation to maintain the desired R value. Thimble is required for Energy Star rated homes

INSTALLATION

- Once the location of the hole has been determined, the hole is cut into the wood sheeting. The vent thimble is placed into the hole with the thimble facing into the wall, the thimble is secured to the wall with screws or nails

PRODUCT DATA

- Available in sizes- to fit 4", 5", 6" exhaust or fresh air intake hoods
